### Project description

In the frame of support and development agreement Altima has solved several tasks.

The first big assignment was an optimization of server platform, both hardware and software. Altima helped to tune, configure and setup new servers and move the system from an old hardware. Also our developers made of work under system performance optimization, that highly (2-3 times) reduced speed of web pages loading and server load. We also installed and configured mail server.

As another part of more than 1,5 years cooperation we provide X-Trade with graphic design services: Altima designers create Flash banners for X-Trade ad campaign, new pages, cards and other stuff. Also, we provide a programming services, that helps our client to extend the capabilities of their online ordering system: this year our programmers developed custom online support system (web chat) to provide X-Trade clients with easy to use tool for communication with support and managers.
